PROJECTS

Explore App

This project included designing and developing a mobile application.

Explore App is a concept of tourist guide mobile application that works on Android devices. The application is based on Angular.js 1 and IONIC frameworks. Location-based service, Google Maps API is used to locate the nearest point of interest and present basic information about places then by integrating Wikipedia API and extracting more information user have to access to more details about specific places.

Website Lab

This project included designing and developing a series of websites.

Website Lab is a collection of fully responsive websites created during my learning process. Websites use AngularJs, javascript, jQuery, Bootstrap, Sass.
